EDUCATION

Illinois Institute of Technology

Chicago, IL

Master of Science in Applied Mathematics, GPA: 4.0

May 2027

Bachelor of Science in Computer Science, GPA: 3.1

May 2026

SKILLS

Relevant Coursework: Introduction to Electronics and Software, Object Oriented Programming I and II, Digital Systems, Data Structures and Algorithms, Database Organization, Discrete Structures, Linear Algebra, Computer Organization and Assembly Language Programming, Systems Programming, Venture Capital for Equity, Probability and Statistics

Systems, Programs, Languages, & Frameworks: Python, Java, MySQL, PostgreSQL, JavaScript, React, HTML, CSS, C, C++, VHDL, MATLAB, Elixir, Phoenix, Dart, Flutter, OCaml, Tailwind, Gatsby, Contentful, Microsoft Excel

Natural Languages: Native in Polish (read/write/speak)

EXPERIENCE

Augmented and Virtual Reality Research Assistant

June 2025 – August 2025

Illinois Institute of Technology

Chicago, IL

- Research will be overseen by Dr. Mark Miller.

Software Engineering Intern

September 2024 – Jan 2025

New Voters

Chicago, IL

- Worked in a full stack role in a 4-person, cross-functional team on the Youth Civic Hub platform. Developed with React, Tailwind, Gatsby, and Contentful.
- Developed a portal for instructors to be able to upload lesson plans and have the ability to collaborate with other teachers.
- Collaborated with a small team of engineers to develop a plan of what new features and technologies can be implemented into the platform to provide more civic engagement resources for schools.

Software Engineering Intern

June 2024 – August 2024

Cars Commerce

Chicago, IL

- Developed and implemented an Elixir algorithm that improved and streamlined search engine optimization when loading reference and research pages on the main Cars.com platform.
- Modified existing Phoenix framework to fix bounce rate and navigation across the Cars.com platform by restructuring breadcrumbs and reformatting landing pages on both web and mobile ports using Elixir, Javascript, HTML, and CSS.
- Collaborated with cross-functional teams in Engineering, Design, and Product Management to work on targeting system issues amidst the CDK Global outage, mitigating the impacts to system health and user interactions.
- Analyzed cloud and data analytics from Datadog APIs to monitor and analyze site performance and detect bugs in the Cars.com platform.

PROJECTS

Election Management Database App

February 2024 – May 2024

Group Project

Chicago, IL

- Collaborated with a team of 3 other developers to create a Python application that tracks political campaign data, including donations, committee members, and party affiliations.
- Developed a SQL-based backend supporting CRUD functionality and OLAP queries for data modeling and abstraction.
- Designed to enhance transparency and usability for tracking political financial information.

Remotely Controlled Arduino Car

October 2022 – December 2022

Personal Project

Chicago, IL

- Built a car using an Arduino UNO board and necessary equipment such as wheels, wiring, and a PS2 receiver.
- Used Arduino Server libraries to interact with Arduino UNO, using C++ code that provided a direct interface to the vehicle based on input from the PS2 controller.
